EXAM 3

		Score:	 out of 100
Math 201 - Calculus I	Name:		

Read all of the following information before starting the exam:

- You have 60 minutes to complete the exam.
- Show all work, clearly and in order, if you want to get full credit. Please make sure you read the directions for each problem. I reserve the right to take off points if I cannot see how you arrived at your answer (even if your final answer is correct).
- Please box/circle or otherwise indicate your final answers.
- Please keep your written answers brief; be clear and to the point. I will take points off for rambling and for incorrect or irrelevant statements.
- This test has 5 problems and is worth 100 points. It is your responsibility to make sure that you have all of the pages!
- Good luck!

1. Find all numbers c that satisfy the conclusion of the Mean Value Theorem f	1.	Find all	numbers c	that	satisfy the	conclusion	of the	Mean	Value	Theorem	for
---	----	----------	-------------	------	-------------	------------	--------	------	-------	---------	-----

$$f(x) = 3x^2 + 2x + 5,$$

on the interval [-1, 1].

c value(s):

$2. \ \, {\rm Find} \,$ the most general antiderivative of the following functions:

(a)
$$f(x) = x^3 + \frac{1}{x} - \frac{2}{1+x^2} + \cos(x) + 3\sec^2(x)$$

answer: (b)
$$f(x) = \frac{1}{\sqrt{x}} - \frac{1}{x^3} + \frac{x^3 - x}{x}$$

answer:

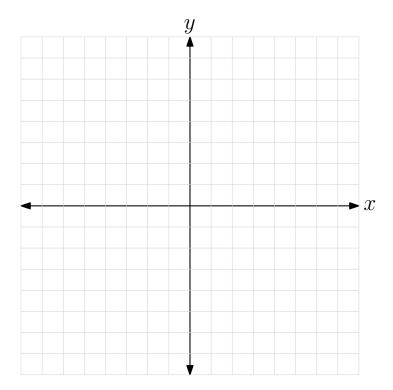

3.	Calculate the following limits. If the limit is ∞ or $-\infty$ clearly indicate this. Otherwise, for limits that do not exist, write D.N.E.
	(a) $\lim_{x \to 0} \frac{\sin(4x)}{\tan(5x)}$
	answer:
	(b) $\lim_{x \to \infty} \frac{x + x^2}{1 - 2x^2}$
	answer:
	(c) $\lim_{x\to 0^+} x^x$

answer:

4. Let $f(x) = \frac{1}{x^2 - 9}$. If you find that f does not have something that is asked for, then please clearly write NONE (or some other indication of this).
(a) Domain of f :
(b) y-intercept (if any):
 (c) x-intercept(s) (if any): (d) Analyze the symmetry of f by determining whether f is even, odd or neither. Justify completely.
f is: (e) Find the horizontal asymptote(s) of f. Justify completely.
horizontal asymptote(s) (if any):
(f) Find the vertical asymptote(s) of f . Justify completely and determine the behavior on both sides of each vertical asymptote.
vertical asymptote(s) (if any):

Intervals where f is increasing (if any): Intervals where f is decreasing (if any): Local maximum value(s) (if any): Local minimum values(s) (if any): (h) Determine where f is concave up, concave down and indicate the inflection point(s). Intervals where f is concave up (if any): Intervals where f is concave down (if any):	(g)	Determine where f is increasing , decreasing and indicate the local maximum value(s) and local minimum value(s) .
Intervals where f is decreasing (if any): Local maximum value(s) (if any): Local minimum values(s) (if any): (h) Determine where f is concave up, concave down and indicate the inflection point(s). Intervals where f is concave up (if any): Intervals where f is concave down (if any):		
Intervals where f is decreasing (if any): Local maximum value(s) (if any): Local minimum values(s) (if any): (h) Determine where f is concave up, concave down and indicate the inflection point(s). Intervals where f is concave up (if any): Intervals where f is concave down (if any):		
Intervals where f is decreasing (if any): Local maximum value(s) (if any): Local minimum values(s) (if any): (h) Determine where f is concave up, concave down and indicate the inflection point(s). Intervals where f is concave up (if any): Intervals where f is concave down (if any):		
Intervals where f is decreasing (if any): Local maximum value(s) (if any): Local minimum values(s) (if any): (h) Determine where f is concave up, concave down and indicate the inflection point(s). Intervals where f is concave up (if any): Intervals where f is concave down (if any):		
Intervals where f is decreasing (if any): Local maximum value(s) (if any): Local minimum values(s) (if any): (h) Determine where f is concave up, concave down and indicate the inflection point(s). Intervals where f is concave up (if any): Intervals where f is concave down (if any):		
Intervals where f is decreasing (if any): Local maximum value(s) (if any): Local minimum values(s) (if any): (h) Determine where f is concave up, concave down and indicate the inflection point(s). Intervals where f is concave up (if any): Intervals where f is concave down (if any):		
Intervals where f is decreasing (if any): Local maximum value(s) (if any): Local minimum values(s) (if any): (h) Determine where f is concave up, concave down and indicate the inflection point(s). Intervals where f is concave up (if any): Intervals where f is concave down (if any):		
Intervals where f is decreasing (if any): Local maximum value(s) (if any): Local minimum values(s) (if any): (h) Determine where f is concave up, concave down and indicate the inflection point(s). Intervals where f is concave up (if any): Intervals where f is concave down (if any):		
Intervals where f is decreasing (if any): Local maximum value(s) (if any): Local minimum values(s) (if any): (h) Determine where f is concave up, concave down and indicate the inflection point(s). Intervals where f is concave up (if any): Intervals where f is concave down (if any):		
Local maximum value(s) (if any): Local minimum values(s) (if any): (h) Determine where f is concave up, concave down and indicate the inflection point(s). Intervals where f is concave up (if any): Intervals where f is concave down (if any):		Intervals where f is increasing (if any):
Local maximum value(s) (if any): Local minimum values(s) (if any): (h) Determine where f is concave up, concave down and indicate the inflection point(s). Intervals where f is concave up (if any): Intervals where f is concave down (if any):		Intervals where f is decreasing (if any):
Local minimum values(s) (if any): (h) Determine where f is concave up, concave down and indicate the inflection point(s). Intervals where f is concave up (if any): Intervals where f is concave down (if any):		
(h) Determine where f is concave up, concave down and indicate the inflection point(s). Intervals where f is concave up (if any): Intervals where f is concave down (if any):		Local maximum value(s) (if any):
Intervals where f is concave up (if any): Intervals where f is concave down (if any):		Local minimum values(s) (if any):
Intervals where f is concave down (if any):	(h)	Determine where f is concave up , concave down and indicate the inflection point(s) .
Intervals where f is concave down (if any):		
Intervals where f is concave down (if any):		
Intervals where f is concave down (if any):		
Intervals where f is concave down (if any):		
Intervals where f is concave down (if any):		
Intervals where f is concave down (if any):		
Intervals where f is concave down (if any):		
Intervals where f is concave down (if any):		
Intervals where f is concave down (if any):		
		Intervals where f is concave up (if any):
		Intervals where f is concave down (if any):
Inflection point(s) (if any):		Inflection point(s) (if any):

(i) Sketch the graph of y = f(x)

5. A farmer with 500 ft of fencing wants to enclose a rectangular area and then divide it into four pens with fencing parallel to one side of the rectangle. What are the dimensions of the largest possible total area of the four pens? You must fully justify your answer using calculus.

Dimensions (or give the total area):
